Summary

Full Stack Developer skilled in building production-ready MERN applications with TypeScript, secure REST APIs, real-time features, and AI-integrated SaaS workflows. Experienced in React, Node.js, Express, MongoDB, TanStack Query, Redux Toolkit, Zustand, and cloud deployment. Strong focus on scalable architecture, clean UI, authentication, performance, and solving real-world business problems.

Technical Skills

Languages: JavaScript, TypeScript, Java

Frontend: React.js, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Framer Motion

Backend: Node.js, Express.js, REST APIs, JWT Authentication, MongoDB, Mongoose, Django REST Framework, FastAPI

Database & Infra: PostgreSQL, pgvector, Redis, Neon, Upstash

Tools: Git, GitHub, VS Code, Postman, Bruno, HTTPie, Cursor, Docker

Testing: Jest, Supertest, Vitest

Deployment: Vercel, Render, Railway, Hostinger

Experience

Full Stack Developer (Freelance)

2023 – Present

Self-Employed

React.js, Node.js, MongoDB, Redux Toolkit

- Delivered end-to-end web solutions for **2 clients**, translating business requirements into scalable full-stack applications.
- Architected responsive user interfaces using **React.js and Tailwind CSS**, ensuring clean UX and cross-device compatibility.
- Engineered secure backend systems with **Node.js, Express, REST APIs, JWT authentication, and MongoDB**.
- Managed complete SDLC from client consultation and feature planning to deployment, testing, and post-launch support.
- Improved application performance by optimizing API response handling, frontend rendering, reusable components, and backend query structure.

Projects

DocuMind AI | *React, Django REST Framework, FastAPI, PostgreSQL, pgvector, Redis, Gemini AI* [Live Demo](#) [GitHub](#) 2026

- Built a **production-grade AI-powered RAG platform** for document-based question answering with grounded citation responses.
- Architected scalable **document ingestion pipelines** supporting PDF, DOCX, and TXT uploads using Django REST Framework and FastAPI microservices.
- Integrated **pgvector with PostgreSQL** for embedding-based semantic search, improving retrieval relevance and contextual accuracy.
- Optimized backend APIs and retrieval workflows using **Redis caching and async processing**, reducing repeated query latency and improving throughput.
- Engineered **citation-aware response generation** to minimize hallucinations by restricting AI responses to retrieved document chunks only.
- Implemented authentication, upload tracking, chat history management, and scalable cloud deployment architecture for concurrent multi-user usage.
- Designed the system for **production scalability and high concurrent usage** with optimized retrieval pipelines and modular backend services.

Konnect | *React, Node.js, Express, MongoDB, TanStack Query, Stream* [Live Demo](#) [GitHub](#) 2025

- Built a **real-time social networking platform** with profile management, content feeds, live chat, and video calling.
- Integrated **Stream Chat and Stream Video SDK** to enable low-latency messaging and peer-to-peer video communication.
- Implemented **JWT authentication** and protected backend routes to secure user sessions and API access.
- Used **TanStack Query** for server-state management, caching, optimized data fetching, and smoother UI synchronization.
- Optimized backend APIs and MongoDB queries to improve scalability, reduce response time, and support increasing concurrent users.
- Implemented optimistic UI updates and handled real-time edge cases including connection drops and message sync reliability.

CodeVault | *React, Redux Toolkit, Node.js, Express, MongoDB, Monaco Editor* [Live Demo](#) [GitHub](#) 2025

- Built a **full-stack code snippet manager** with **Monaco Editor**, delivering a VS Code-like in-browser coding experience.
- Implemented **Redux Toolkit** for efficient global state management, enabling snippet creation, editing, search, and filtering.
- Engineered optimized **RESTful APIs** using Node.js, Express, and MongoDB to handle CRUD operations with clean data flow.
- Added **syntax highlighting and multi-language support**, improving code readability and snippet reuse for developers.
- Designed a clean, developer-focused UI with fast interactions, reusable components, and responsive layouts.

Key Achievements

- Built and deployed multiple **full-stack applications** with authentication, dashboards, REST APIs, AI workflows, and responsive interfaces.
- Implemented **real-time systems** including live chat and video calling using scalable third-party infrastructure.
- Integrated **AI-powered workflows and RAG architectures** into SaaS applications for document intelligence and automation.
- Handled full-stack development independently, covering frontend architecture, backend APIs, database design, testing, optimization, and deployment.

Education

Bachelor of Technology in Computer Science Engineering

Expected May 2027

Lords University

Alwar, Rajasthan
