

RAHUL SAIN

MERN Stack Developer

📍 Alwar, Rajasthan, India 📞 +91-9602958067 ✉️ sainrahul374@gmail.com 🔗 linkedin.com/in/rahulxcodes 🐙 github.com/Anos714

Summary

Full Stack Developer skilled in building production-ready MERN applications with TypeScript, secure REST APIs, real-time features, and AI-integrated SaaS workflows. Experienced in React, Node.js, Express, MongoDB, TanStack Query, Redux Toolkit, Zustand, and cloud deployment. Strong focus on scalable architecture, clean UI, authentication, and solving real-world business problems.

Technical Skills

Languages: JavaScript, TypeScript, Java

Frontend: React.js, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Framer Motion

Backend: Node.js, Express.js, REST APIs, JWT Authentication, MongoDB, Mongoose

Tools: Git, GitHub, VS Code, Postman, Bruno, HTTPie, Cursor, Docker

Testing: Jest, Supertest, Vitest

Deployment: Vercel, Render, Railway, Hostinger

Experience

Full Stack Developer (Freelance)

2023 – Present

Self-Employed

React.js, Node.js, MongoDB, Redux Toolkit

- Delivered end-to-end web solutions for **2 clients**, translating business requirements into scalable MERN stack applications.
- Architected responsive user interfaces using **React.js and Tailwind CSS**, ensuring cross-device compatibility and clean user experience.
- Engineered secure backend systems with **Node.js and Express**, implementing REST APIs and optimized MongoDB data access.
- Managed complete SDLC from client consultation and feature planning to deployment, testing, and post-launch support.
- Collaborated with clients to gather requirements and translate them into scalable technical solutions
- Improved application performance by optimizing API response handling and frontend rendering

Projects

Konnect | *React, Node.js, Express, MongoDB, TanStack Query, Stream* [Live Demo](#) [GitHub](#)

2025

- Built a **real-time social networking platform** with profile management, content feeds, live chat, and video calling.
- Integrated **Stream Chat and Stream Video SDK** to enable low-latency messaging and peer-to-peer video communication.
- Implemented **JWT authentication** and protected backend routes to secure user sessions and API access.
- Used **TanStack Query** for server-state management, caching, optimized data fetching, and smoother UI synchronization.
- Engineered scalable REST APIs with **Node.js, Express, and MongoDB**, supporting user data, posts, and social interactions.
- Implemented optimistic UI updates and caching strategies to improve perceived performance and user experience
- Handled edge cases in real-time communication including connection drops and message sync reliability
- Structured backend with modular architecture for scalability and maintainability

SmartBillr | *React, Node.js, Express, MongoDB, AI API, Tailwind CSS* [Live Demo](#) [GitHub](#)

2026

- Developed a **SaaS-based invoice generation platform** supporting both manual invoice creation and AI-powered invoice workflows.
- Integrated **AI-assisted invoice generation**, allowing users to generate structured invoices from natural language inputs.
- Built secure backend APIs using **Node.js and Express** for invoice creation, editing, storage, retrieval, and user-specific data handling.
- Designed MongoDB schemas for managing users, invoices, client details, invoice items, totals, and payment-related records.
- Created a responsive dashboard with **React and Tailwind CSS**, improving usability for freelancers, businesses, and non-technical users.
- Designed invoice data models supporting tax calculations, itemized billing, and client management
- Planned extensible SaaS architecture to support features like subscription billing and analytics dashboards
- Implemented validation and error handling for financial data accuracy and reliability

Key Achievements

- Built and deployed multiple **production-ready MERN applications** with authentication, dashboards, APIs, and responsive interfaces.
- Implemented **real-time systems** including live chat and video calling using scalable third-party infrastructure.
- Integrated **AI-powered workflows** into a SaaS product to automate invoice generation and improve user productivity.
- Handled full-stack development independently, covering frontend architecture, backend APIs, database design, and deployment.

Education

Bachelor of Technology in Computer Science Engineering

Lords University

Expected May 2027

Alwar, Rajasthan
